BRAINSTROMING - IDEA GENERATION – PRIORITIZATION

Introduction:

The **Project Brainstorming** phase is the "creative engine" of your ServiceNow automation journey. It’s where you move from identifying high-level pain points to defining specific, technical solutions that turn messy manual data into streamlined workflows. brainstorming isn't just about listing ideas—it’s about mapping how data moves between people and systems to find the "automation sweet spot."

Idea generations

Idea 1 : Employee Data Management System (Centralized Database)

Stores all employee information in one centralized database for easy access and automated updates.

Advantages:

- Easy access to employee information
- Improves data accuracy

Disadvantages:

- High initial setup and development cost
- Requires regular maintenance and updates

Idea 2: Automated Payroll System

Automatically calculates employee salaries using attendance and salary data and generates payslips

Advantages

- Saves time in salary calculations
- Reduces payroll errors

Disadvantages

- Requires accurate and complete input data
- Integration with attendance systems may be complex

Idea 3: Attendance and Leave Automation

Uses biometric devices or mobile apps to automatically track employee attendance and leave records.

Advantages

- Simplifies HR monitoring
- Provides accurate attendance records

Disadvantages

- Employees may have privacy concerns

Idea 4: Automated Employee Document Generation

Automatically creates documents like offer letters, payslips, and contracts using stored employee data.

Advantages

- Ensures consistent document formatting
- Allows bulk generation of documents

Disadvantages

- Requires proper template setup
- Errors in the database will appear in generated documents

Prioritization Template

1. Employee Data Collection Template

2. Priority Calculation Template

3. Automated Task Assignment Template

4. Dashboard / Summary Template (high,medium,low)

5. Workflow Template (Process Explanation)

Employee Data → Data Analysis → Priority Calculation → Task Assignment → Monitoring Dashboard

Conclusion

Automating employee data helps organizations improve **efficiency, accuracy, and productivity in HR operations**. However, successful implementation requires **proper system design, security measures, accurate data management, and regular maintenance**
